EDUCATION

LORDLAND UNIVERSITY
Bachelor of Christian Management / 2024

SEOHAE COLLEGE
Associate degree, Practical Music / 2019

HANLIM ARTS HIGH SCHOOL
Practical Music / 2015

CORE COMPETENCIES

Illustrator / Photoshop
Technical drawings, tech packs
Graphics and artwork

AI visualization
AI-generated 3D imagery
Product mockups, design revisions
Surface-treatment comparisons
Prompting and output review

Design development
Seasonal concepts, design boards
Outerwear, bottoms and jersey
Fittings, fit refinement
Construction specifications

Planning and collaboration
Capsules, artist collaborations
Design and cost discussions with MDs
Store feedback, supplier communication

Digital tools
Web portfolio planning and design with AI coding tools
MS Office (MOS), Notion

PROFESSIONAL EXPERIENCE

LF VANESSA BRUNO athé

Womenswear Designer / Outerwear, Bottoms, Jersey

May 2021 - Present

Womenswear designer with over five years of experience developing outerwear, bottoms and jersey, drawing on the materials and silhouettes of French-inspired womenswear. Took on down and handmade outerwear in my third year, covering design proposals, technical drawings, tech packs, fittings, sample refinement and communication with overseas suppliers.

• Developed tailored jackets, fur, down, leather and tweed outerwear. Translated WGSN, runway and store research into seasonal design boards and styling proposals.

• Sole jersey designer for the SS22 Jang Woo-chul collaboration; co-planned a tennis capsule. Developed bear keyrings, labels, embroidery, graphics and packaging for the SS25 YK Jeong collaboration.

DESIGN & COLLABORATION

Reinterpreting materials and form
Proposed a high-neck handmade blouson inspired by a half-zip knit styled with denim. Developed its silhouette and details using fabric developed by the materials team. My proposed denim styling was adopted in the seasonal lookbook.

Balancing design details and target retail price
Replaced pintucks with gathers where a print obscured the detail. For a blouse defined by chemical-lace embroidery, explained why the embroidery should remain and worked with the merchandising (MD) team to agree an adjusted cost-to-retail ratio.

Fit analysis and follow-up improvements
Personally fitted trousers designed by a colleague to investigate store feedback on length. Identified how customers' wearing position interacted with the rise. Following team review, the proposed adjustment was reflected in reorders and subsequent products of the same silhouette.

AI IN DESIGN PRACTICE

Independently adopted AI to clarify design details in day-to-day work. Generated variations from my own Illustrator drawings and revision instructions, then checked whether the requested details were represented correctly.

• Knit vest: visualized knit structure and pocket interiors, and refined English production instructions to communicate the intended construction.

• Bear keyring: compared leg proportions through AI-generated 3D mockups after reviewing a physical sample, then requested a revised sample.

• Graphics and embroidery: compared surface treatments using my own artwork to inform the choice of application.

PRODUCT RESULTS

A mercerized jersey top sold 600 units across black and white in seven weeks in SS24. A sleeved version developed in response to store feedback sold 1,000 units in SS26.

MOTIVATION

I design clothes that catch the eye and keep people coming back after wearing them. I want to bring my outerwear experience to MUSINSA STANDARD WOMAN's varied materials, silhouettes and everyday styling. I would combine design judgment with AI visualization to contribute to product proposals and sample development.

RELATED EXPERIENCE

Apr 2018 - Apr 2021

Showroom presentations, overseas order events and design-room fitting work for fashion companies including Handsome, LF and Samsung C&T.
